

EN	Description	LT	Aprašymas				
Electronic speed controllers VRE-T..			Elektroniniai greičio reguliatoriai VRE-T..				
Electronic speed controllers VRE-T.. are based on the principle of phase angle control. They are applicable for speed adjustment of single phase voltage controllable AC motors. A number of different motors and fans can be controlled with one controller but maximum current can not be exceeded. Minimum speed can be adjusted using potentiometer. There are two working modes: 1. ‘Hard’ start: The motor will always start (or restart) at max. speed for 8-10 seconds, after that the motor speed automatically follows the potentiometer position. 2. Normal start: the motor starts according to the potentiometer position.			Keisdami įtampą VRE-T.. elektroniniai reguliatoriai, keičia vienos fazės 230V variklių, ventiliatorių sukimosi greitį. Vieno reguliatoriaus pagalba galima valdyti keletą variklių su sąlyga, kad suminė reguliatorių srovė neviršytų reguliatoriaus srovės. Regulatorius pasirenkamai gali pradėti darbą nuo maksimalaus greičio ir po 8-10 sec., mažinti iki reikiama -nustatytu potenciometru greičio arba pardėti darbą nuo greičio nustatytu potenciometru.

Working modes							
Controllers have two working modes							
<ol style="list-style-type: none"> ‘Hard’ start: The motor will always start (or restart) at max. speed for 8-10 seconds, after that the motor speed automatically follows the potentiometer position. (Factory default) Normal start: the motor starts according to the potentiometer position. (Turn ON the switch under the cover) 							
Installation and connection							
Controllers are designed to mount on wall with cable glands downward. Controllers can not be installed in explosive and aggressive substances atmosphere. Controllers can be used only for motor with changeable supply voltage.							
Brake the mains voltage. Remove the cover of the controller. Mount the surface mounting case. The controller must be mounted vertically with the cable entry at the bottom. The controller should be wired in accordance with the supplied wiring diagram and markings on the terminals. Once all wiring to the controller has been completed, check if all connections have been made to the correct terminals and all connections are secure. Turn on mains voltage and controller. Start the controller. The minimum speed is factory preset at 110V.							
NOTE! All electrical connections should be carried out by qualified and authorized electrician in accordance with national and local regulations.							
Speed adjustment							
NOTE! Put the potentiometer at minimum. Trimmer /MIN/ is adjusted so that the motor does not stop due to variations of mains voltage and that it restarts smoothly after power failure.							
Fuse changing							
Check and change fuse. Put the parts back in place. Use only recommended fuses /5*20mm, 6*30mm ceramic, quick acting F, with high breaking capacity H. Use of incorrect fuse will avoid warranty.							
Service							
Please check if the right voltage is applied, all connections are correct. The motor to be controlled is functioning. The fuse in the controller is OK.							
Greicio reguliavimas			PASTABA! Visus elektrinius sujungimus gali atliliki tik kvalifikuotas ir īgaliotas elektrikas, pagal galiojančius tarptautinius ir nacionalinius elektros saugos reikalavimus.				
Saugiklio keitimasis			Nuimkite reguliatoriaus rankenelę, nusukite veržlę ir nuimkite priekinę dalį. Pakeiskite saugiklį ir surinkite reguliatorių atvirkštine tvarka. Naudokite tik greito veikimo 5x20 mm saugiklį su F charakteristiką. Netinkamo saugiklio naudojimas, panaikiną garantijos galiojimą.				
Aptarnavimas			Įsitinkinkite ar paduodama reikalinga įtampa, ar reguliatorius saugiklis veikiantis, ar veikia norimas reguliuoti ventiliatorius.				

Maintenance

The controller needs no specific maintenance. The housing may be cleaned using a moist cloth. In case of heavy filthiness, clean with non-aggressive cleaners. Pay attention that no fluids gets into controller. Reconnect mains only after the controller is completely dry.

All electrical connections should be carried out after supply voltage break by qualified and authorized electrician in accordance with national and the local regulations.

Priežiūra

Regulatorius nereikalauja jokios specjalios priežiūros. Jei yra poreikis galima reglatoriaus korpusą valyti drėgna šluoste. Būkite dėmesingi, saugokite reglatorių nuo bet koks skysčio ar drėgmės patekimo į jo vidų. Patekus drėgmei, išjungti galima tik visiškai reglatoriui išdžiuvus.

Tik kvalifikuoti specialistai gali atlkti reglatoriaus aptarnavimo bei priežiūros darbus.

Warranty and Restrictions

The manufacturer warrants 2 years from delivery date against defect in manufacturing. Any modifications or alterations to the product annul the warranty!

Garantija

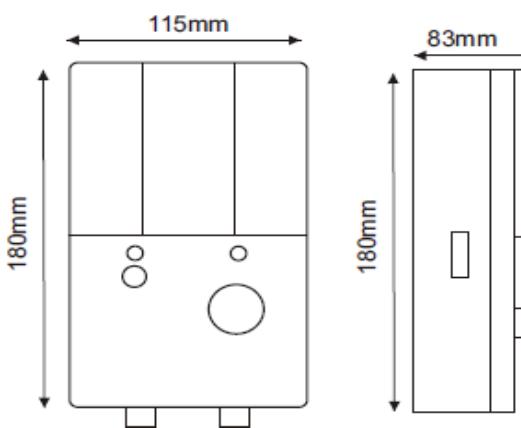

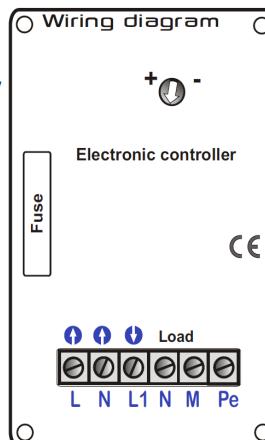

Gamintojas suteikia gaminiui 2 metų garantiją nuo pirkimo datos. Bet kokie gaminio pakeitimai panaikina gamintojo garantiją!

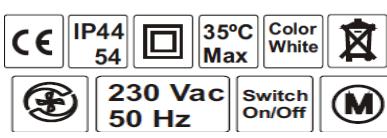

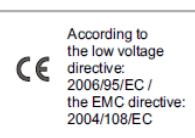

1. Power switch

2. Kick start switch/Led green light/
when K-start is ON LED green will
work for 8-10sec.

3. Fan LED indicator light

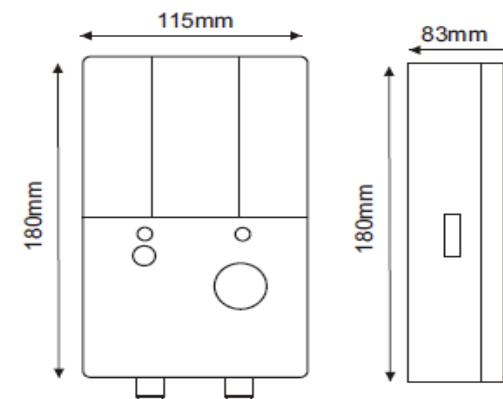

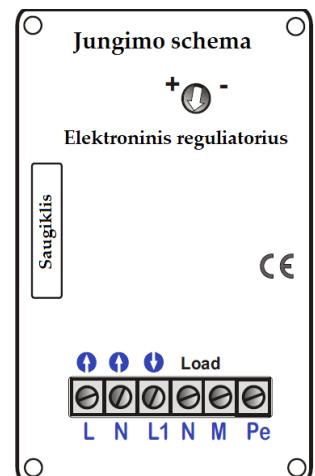

Terminal block	
L	Supply voltage 230V AC
N	Neutral
L ₁ , N	output connections- max load 1A (i.e. For air damper actuators)
